

THE RESEARCH QUESTION

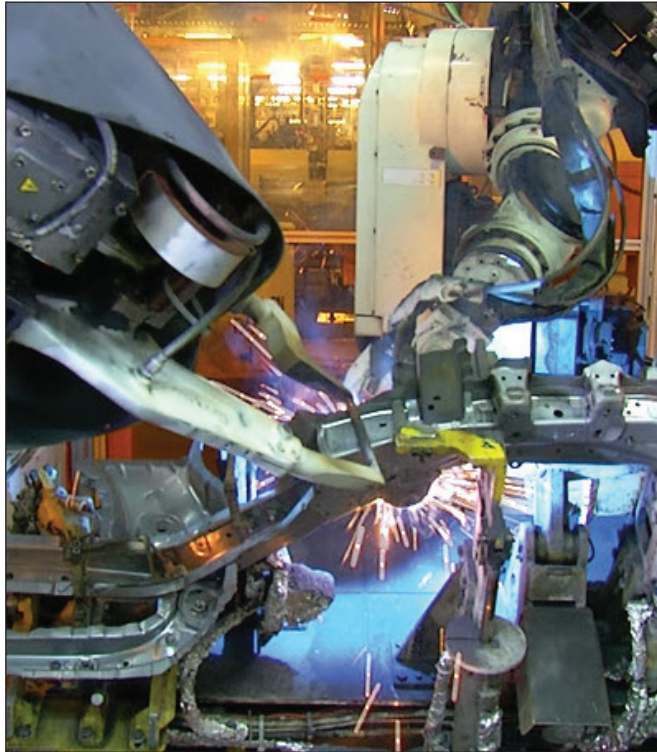

How can the Manufacturing and Life Sciences (MLS) sector develop a methodology for generalizing a long-lead facility with an undefined manufacturing process?

THE RESEARCH PROJECT

This research team expects to build upon the other work CII has performed (i.e., Fast Track, FEP planning and modularization) and generate deliverables that would provide a methodology or tool for evaluating which specific parts of a project can be generalized to aid in the development of a flexible facility.

In 2015, we shifted to CII's PDRI for all of Lilly's major capital projects. Using the PDRI checklist, we are able to compare our results to the rest of the industry, and this tool allows us to create our own 'internal' norm, as well.

BENEFITS TO CII MEMBERS

Participation in the identification of industry-driven, collaborative research

Opportunities to develop leaders within your company

Access to executive summaries, reports, tools and research performed by CII

Implementation support results in organizational improvements to planning, execution and the delivery of capital facilities projects

Being part of the forum that sets standards across the industry

Networking opportunities at the CII Annual Conference where you will have access to academics, researchers and industry leaders

MLS BUSINESS IMPERATIVES

Improve Speed to Market

Innovative Project Delivery

Reduce Costs

Improve Capital Productivity

JOIN CII

CII'S LEGACY

CII increases the predictability, consistency and productivity of project performance.

CUSTOM SECTOR SOLUTIONS

Implementation, professional development, and research topics tailored to specific industries

CONTINUOUS INNOVATION

Increased shareholder value, return on capital effectiveness, radical return from capital projects
