How can the Downstream & Chemicals sector (DC) double productivity in capital projects?

The goal of this study is to establish a road map for research of ground-breaking, bold game-changing ideas, technologies and practices that lead to double or greater productivity. The road map should be specific to DC members and drive for “wins” for all parties – owners, contractors, subcontractors, suppliers and consultants.

Eastman has been a long-term member of CII and appreciates the collaborative work to enhance industry practices in the EPC space. As an owner company, we have reaped benefits from the CII tools, but, additionally, the personal development, networking, and collaboration with academia have enabled our resources to improve performance in this important function of our company.

- Richard Bonner
Vice President of Worldwide Engineering & Construction
Eastman
CII increases the predictability, consistency and productivity of project performance.

Participation in the identification of industry-driven, collaborative research

Opportunities to develop leaders within your company

Access to executive summaries, reports, tools and research performed by CII

Implementation support results in organizational improvements to planning, execution and the delivery of capital facilities projects

Being part of the forum that sets standards across the industry

Networking opportunities at the CII Annual Conference where you will have access to academics, researchers and industry leaders

CII increases the predictability, consistency and productivity of project performance.

Implementation, professional development, and research topics tailored to specific industries

Increased shareholder value, return on capital effectiveness and efficiency, optimal return from capital projects
