THE RESEARCH PROJECT

How can higher levels of facility design standardization be achieved?

This study seeks to determine the potential of standardization by obtaining a better understanding of how much upstream, midstream and mining (UMM) value is lost from excessive design customization, determining the cost of added/strained capacity (from standardization) and identifying the fundamental tradeoffs with design standardization.

UMM RESEARCH TOPIC 1A

Customizing Best Practices for the UMM Sector

THE UPSTREAM, MIDSTREAM & MINING SECTOR COMMITTEE

CII provides a valuable avenue to develop future leaders within our company.

BENEFITS TO CII MEMBERS

Participation in the identification of industry-driven, collaborative research

Opportunities to develop leaders within your company

Access to executive summaries, reports, tools and research performed by CII

Implementation support results in organizational improvements to planning, execution and the delivery of capital facilities projects

Being part of the forum that sets standards across the industry

Networking opportunities at the CII Annual Conference where you will have access to academics, researchers and industry leaders

JOIN CII

CII'S LEGACY

CII increases the predictability, consistency and productivity of project performance.

CUSTOM SECTOR SOLUTIONS

Implementation, professional development, and research topics tailored to specific industries

CONTINUOUS INNOVATION

Increased shareholder value, return on capital effectiveness and efficiency, optimal return from capital projects
